

First Aid Response

Information Management

Learning Outcomes

Knowledge Objectives (by the end of this Unit, you will be able to...)

1. Explain the rationale for recording patient health information
2. Outline what information is required on the Ambulatory Care Report (ACR) (or other patient care record) and how it should be entered
3. Explain the essential elements of a verbal handover report to other pre-hospital First Aid Response teams
4. Explain the management and storage for ACRs or other patient care/accident/incident record in line with relevant legislation

Learning Outcomes

Attitudinal Objectives (by the end of this Unit, you will be able to...)

1. Understand how recording data contributes to a high standard of patient care
2. Explain why documentation should be completed in a timely manner but should not distract from care and communication with the patient

Skills Objectives (by the end of this Unit, you will be able to...)

1. Complete an ACR (or other patient care record) for a given patient scenario
2. Demonstrate a “hand over” report to other member of the EMS

Why record information

- For what reasons do we record patient & incident information?

Why record information

- Clinical
 - Clinical responsibility
 - In cases of life-threatening conditions patient care will take precedence
 - Patients record: documentation of out-of-hospital events
 - Time of occurrence of critical events (accurate assessment of condition)

Why record information...

- Records
 - Recording interventions and medications administered to patients pre-hospital is an essential clinical responsibility of all pre-hospital emergency care practitioners
- Legal Protection
 - Legal document
 - Identifies the care that has been given
 - A properly completed ACR will provide protection and will be essential if called as a witness to court

Remember.....

Important!

*Inaccurate documentation is potentially
damaging to patients, services and the
professional standing of the pre-hospital
emergency care practitioner*

Information required

- Sections
 - Incident Information
 - Details of incident
 - Patient Information
 - Clinical Information
 - Primary Survey
 - Secondary Survey
 - Medication Treatment
 - Vitals
 - Declined Treatment

**ACR/PCR should not distract from
your care giving or communication
with the patient!**

Copies

- Top Copy
 - Travels with the patient
 - given to arriving EMS
- Bottom Copy
 - Stored locally by CDO
 - Hand delivered to Civil Defence College for storage at a later point

Handover...

- Important to let EMS take control once they arrive
- Vital to hand over all information you have gathered
- Recording the timing of events or medications is very important
- Do not leave scene until told you can go
 - Duty of care
 - Abandonment!

Handover...

- What to do;
 - Introduce the casualty to the EMS
 - Give a summary of their condition, what you found when you arrived and what treatment you provided
 - Ensure that your hand over is comprehensive, but concise

Handover...

- ASHICE!

- **A** Age of patient
- **S** Sex of patient
- **H** History (what happened)
- **I** Injuries
- **C** Condition of patient
- **E** ETA

Assessment

- Give 3 reasons why do we record patient information
- State 5 pieces of information that are recorded on an ACR
- Why is this important not to be distracted by filling out an ACR when treating a patient?
- Explain the essential elements of a verbal handover report to arriving EMS

Summary

- Why record patient information
- Key information to record
- Completing an ACR for a patient scenario
- Handover to EMS and what to do/say
- Demonstration of effective handover
